- Our needs
- What we have done?
- Future
- DEMO

- Issuing apostilles since 2002
 - With the basic information the convention requests
- Requests for validation/authenticity: 1 per year
- Use an IS (e-Notary) for issuing apostilles
- Visually check the handwritten signatures and stamps
- Goal: Do it as simple as possible - our plan is to drop the requirement for apostilles from foreign EU countries - the documents should travel freely

What we have done?

- Apostille e-Register since 2002
- Integration with the IS from our competent authority (e-Notary)
- Public Document Issuers Signatures and Stamps Database
- Integration layer

- If the time has come, we certainly plan to make Estonian e-App solution as good as possible:
 - Category 7: visual image, seal with digital certificate
 - Goal: To make the same amount of information public as used internally
 - Security and privacy?
 - Solutions against fishing
 - i.e., we have no problems making personal identification codes public
